

Village of Pemberville Lead & Copper Mapping Project

The Village of Pemberville is asking all residents to complete the attached survey to assist in obtaining necessary information required by the Ohio EPA. Every community in the State of Ohio has to create a map of their water system and areas of which may contain lead services lines or have lead containing fixtures/solder. If you could answer the questions to the best of your ability, then return to Town Hall or complete the online survey at www.villageofpemberville.org. If you have any questions or are unsure of the information needed you can call 419-287-3832.

In June 2016, HB 512 was passed to enact section 6109.121 of the Ohio Revised Code (ORC) to establish requirements governing lead and copper testing for community and nontransient noncommunity public water systems and to revise law governing lead contamination from plumbing and fixtures. The law requires community water systems to identify and map areas of their distribution systems that are known or likely to contain lead service lines. These systems are also required to identify and provide a description of the characteristics of buildings served by the system that may contain lead solder, fixtures or pipes. Single building community and nontransient noncommunity water systems are required to map areas of the system that have solder, fixtures and pipes containing lead.

Village of Pemberville Water Line Survey

Customer Name: _____ Survey Date: _____

Home Address: _____

Year Built: _____ Don't Know

Has the original water plumbing been updated? Yes No Don't Know

Year Water Plumbing Updated: _____ Don't Know
